

About FWS Group of Companies

The FWS Group of Companies is headquartered in Winnipeg, Manitoba and provides services to clients across Canada and around the world.

Though based in the tradition of design-build construction, FWS' evolution now involves pioneering a wide range of project development approaches that include various forms of Construction Management. The fully integrated FWS approach to construction and development unifies owner, consultants and contractor(s) into a results-oriented building team. The approach promotes single-source accountability, improved cost control, shortened time frames, and a relationship that keeps clients coming back again and again.

Design-Build Leaders

In the design-build process, design and construction are overlapped and integrated, from preliminary design through to project completion, ensuring that all disciplines are fully synchronized and coordinated. Benefits include reduced costs, improved flexibility, and shorter project schedules. Our extensive experience with design-build projects allows us to bring a unique team-based perspective to traditional Design-Bid-Build, Project Management, and Construction Management projects.

Excellence in Construction Management

FWS' strong design-build heritage made the transition to large Construction Management and Project Management both natural and effective. We are now a leader in providing tailored services to a broad range of clients – and an even broader range of project sizes and subjects. FWS' team-based, open-book approach, combined with the option of guaranteed maximum price contracts, provides clients with the assurance of competitive pricing, process integrity, and peace of mind.

FWS Industrial

FWS Industrial has worked on a number of large industrial processing projects in mining, bulk material handling, agricultural plant installations, waste water treatment and other process plants. We draw on our internal design and engineering capacity, coupled with our extensive construction management experience, to successfully facilitate the development of effective industrial processing solutions for a wide range of granular materials processing related construction projects.

The FWS Industrial team can perform design and construction management of complex, fast tracked, civil and structural construction projects that successfully deliver for companies, value added design, construction and management services for large complex projects.

PRECISION,
PROFESSIONALISM,
EFFICIENCY & QUALITY.

Mining and Bulk Material Handling Design and Construction Services

Led by our team of engineers and executives familiar with the mining industry, FWS Industrial has worked on some major projects in the mining sector.

We have designed and built large structural frames using both steel and concrete; equipment installations and steel erection designed using our in-house engineering capabilities. Our ability to execute design-build construction of mining surfaces infrastructure using our proven FWS team and our ability to manage construction of the overall project is well established.
