

About FWS Group of Companies

The FWS Group of Companies is headquartered in Winnipeg, Manitoba and provides services to clients across Canada and around the world.

Though based in the tradition of design-build construction, FWS' evolution now involves pioneering a wide range of project development approaches that include various forms of Construction Management. The fully integrated FWS approach to construction and development unifies owner, consultants and contractor(s) into a results-oriented building team. The approach promotes single-source accountability, improved cost control, shortened time frames, and a relationship that keeps clients coming back again and again.

Design-Build Leaders

In the design-build process, design and construction are overlapped and integrated, from preliminary design through to project completion, ensuring that all disciplines are fully synchronized and coordinated. Benefits include reduced costs, improved flexibility, and shorter project schedules. Our extensive experience with design-build projects allows us to bring a unique team-based perspective to traditional Design-Bid-Build, Project Management, and Construction Management projects.

Excellence in Construction Management

FWS' strong design-build heritage made the transition to large Construction Management and Project Management both natural and effective. We are now a leader in providing tailored services to a broad range of clients – and an even broader range of project sizes and subjects. FWS' team-based, open-book approach, combined with the option of guaranteed maximum price contracts, provides clients with the assurance of competitive pricing, process integrity, and peace of mind.

FWS Mechanical

FWS Mechanical is a group established within the FWS Group of Companies to effectively serve the needs of clients by focusing on cost effective, efficient retrofit, and upgrade services for ag industrial, processing, bulk material handling, fertilizer, malting, and other industrial related sectors. It has the important advantage of being able to access the vast experience of FWS' design and engineering teams required for technological or productivity upgrades, while remaining nimble enough to effectively fast track the design, management, integration, and installation of processing and handling works.

Our team works closely with the owner to meet their expectations, while developing the most cost effective solutions for any specific application. This approach ensures a smooth integration and minimal interference with operating efficiencies at existing facilities.

Retrofit, Upgrade and Integration Construction Services

PRECISION,
PROFESSIONALISM,
EFFICIENCY & QUALITY.

FWS Mechanical employs a team of experienced professionals that have the objective of being a solution provider while delivering precision and the shortest possible construction time.

We have built and integrated numerous processing, fertilizer, malting and bulk material handling plant upgrades, including equipment performance upgrades and retrofits. We utilize our team's well-established capacity to manage multiple construction projects in a timely and precision oriented manner, leading to the high level of customer satisfaction that brings customers back, time and time again.
