

About FWS Group of Companies

The FWS Group of Companies is headquartered in Winnipeg, Manitoba and provides services to clients across Canada and around the world.

Though based in the tradition of design-build construction, FWS' evolution now involves pioneering a wide range of project development approaches that include various forms of Construction Management. The fully integrated FWS approach to construction and development unifies owner, consultants and contractor(s) into a results-oriented building team. The approach promotes single-source accountability, improved cost control, shortened time frames, and a relationship that keeps clients coming back again and again.

Design-Build Leaders

In the design-build process, design and construction are overlapped and integrated, from preliminary design through to project completion, ensuring that all disciplines are fully synchronized and coordinated. Benefits include reduced costs, improved flexibility, and shorter project schedules. Our extensive experience with design-build projects allows us to bring a unique team-based perspective to traditional Design-Bid-Build, Project Management, and Construction Management projects.

Excellence in Construction Management

FWS' strong design-build heritage made the transition to large Construction Management and Project Management both natural and effective. We are now a leader in providing tailored services to a broad range of clients – and an even broader range of project sizes and subjects. FWS' team-based, open-book approach, combined with the option of guaranteed maximum price contracts, provides clients with the assurance of competitive pricing, process integrity, and peace of mind.

Fertilizer Facilities

FWS adopted the Design-Build approach as far back as 1973. Since then, our growth has taken us around the globe, including successful integration of value added design and construction services for all sizes of complex, fast-tracked construction projects in the bulk material handling, agricultural and process plant sectors.

Whether new Greenfield sites, or retrofits of existing structures and machinery, FWS' in-house design and construction expertise ensures successful project execution. Our state of the art designs for flat storage facilities and blending towers, combined with thirty years experience with bulk material handling conveyances, enable FWS to focus on facility performance, quality and cost effectiveness.

The ability to provide turnkey options for the fertilizer industry differentiates FWS from our competition. We partner regularly with the most recognized industry suppliers, yet also retain the flexibility to work with select suppliers that individual Owners may have chosen to align themselves with. FWS provides clients with the unparalleled in-house design and construction services necessary to achieve the on time and on budget project delivery that truly meets goals and expectations.
