

About FWS Group of Companies

The FWS Group of Companies is headquartered in Winnipeg, Manitoba and provides services to clients across Canada, and around the world.

Though based in the tradition of design-build construction, FWS' evolution now involves pioneering a wide range of project development approaches that include various forms of Construction Management. The fully integrated FWS approach to construction and development unifies owner, consultants and contractor(s) into a results-oriented building team. The approach promotes single-source accountability, improved cost control, shortened time frames and a relationship that keeps clients coming back again and again.

Design-Build Leaders

In the design-build process, design and construction are overlapped and integrated, from preliminary design through to project completion, ensuring that all disciplines are fully synchronized and coordinated. Benefits include reduced costs, improved flexibility and shorter project schedules. Our extensive experience with design-build projects allows us to bring a unique team-based perspective to traditional Design-Bid-Build, Project Management and Construction Management projects.

Excellence in Construction Management

FWS' strong design-build heritage made the transition to large Construction Management and Project Management both natural and effective. We are now a leader in providing tailored services to a broad range of clients – and an even broader range of project sizes and subjects. FWS' team-based, open-book approach, combined with the option of guaranteed maximum price contracts, provides clients with the assurance of competitive pricing, process integrity and peace of mind.

Alternative Energy

The Alternative Energy sector has been long recognized as an area with tremendous growth potential and unique construction requirements.

FWS' broad experience with diverse and complex industrial projects enables a natural fit with the critical considerations necessary for effective delivery of Alternative Energy projects. Expertise in material storage and handling solutions as well as knowledge of material processing and utilization technologies allows FWS to effectively respond to a wide range of diverse project opportunities within the Alternative Energy space.

In addition to our primary focus on addressing client needs, FWS is also proactively developing our own technology concepts in Corn Fractionation for the ethanol industry.

Whether constructing an ethanol plant or assisting with the pioneering of innovative bio-energy solutions, FWS works with clients to develop cost-effective and sustainable results. From installing a boiler that can be fuelled by biomass instead of natural gas, to fully integrated closed-loop biorefineries, FWS has the capabilities to meet the needs of many Alternative Energy projects.

Corn Fractionation

FWS developed the patented FWS Dry Fractionation System to offer corn ethanol producers a platform for improving profitability, minimizing environmental impact and addressing the Food vs. Fuel debate. The FWS Dry Fractionation System is built upon proven equipment and processes, providing a highly competitive price point with opportunity for an attractive return on investment.
